

C++ Excuse Generator Program

Write a beginner friendly cpp program that generates creative excuses for missing homework or assignments. The program should generate different excuses each time it runs. For example: If the Input is Priya, then the possible output.

- "Priya couldn't finish the assignment because the laptop decided to install updates for six hours."
- "Priya was about to complete the homework when the Wi-Fi mysteriously disappeared."
- "Priya tried finishing the assignment, but the computer keyboard suddenly stopped cooperating."

Create a program that:

- Takes user input (student name)
- Stores multiple excuse templates
- Uses random selection to generate excuses
- Replaces placeholders like {name} with the actual input
- Displays a random excuse

The program should have at least 10 excuse templates.

Example template format:

"{name} couldn't complete the assignment because the laptop battery died unexpectedly."

"{name} tried finishing the homework, but the internet stopped working."

"{name} was ready to submit the assignment when the file mysteriously disappeared.". Generate such excuses that it looks real and mam doesnt get a thought this excuse maybe false that much creative.I want code with comments and easily understandable by beginner.

💡 This is a fun way to practice using **strings**, **vectors**, and **randomization** in C++. Since you are a beginner, I've kept the logic straightforward: we use a vector to store the "blueprints" of the excuses and then use the `rand()` function to pick one.

C++ Excuse Generator Program

C++

```
#include <iostream>
#include <vector>
#include <string>
#include <ctime>    // Needed for time()
#include <cstdlib> // Needed for rand() and srand()

using namespace std;

int main() {
    // 1. Seed the random number generator so we get a different result every time
    srand(time(0));

    string studentName;
    cout << "Enter the student's name: ";
    getline(cin, studentName); // Using getline to allow spaces in names

    // 2. Store 10 creative and "realistic" excuse templates
    // We use a vector of strings to hold the excuses
    vector<string> templates = {
        "I had the assignment ready, but the local cloud drive failed to sync the",
        "I couldn't finish because the laptop charger shorted out and a replacement",
        "I was almost done when the operating system forced a critical update that",
        "I tried to submit, but the home Wi-Fi router overheated and stopped working",
        "I finished the work, but the USB drive became corrupted and is currently",
        "I was working late when the keyboard suddenly stopped responding to specific",
        "I couldn't complete the task because the PDF editor crashed and deleted my",
        "I was about to upload the file when the ISP reported a neighborhood-wide",
        "I completed the assignment, but the laptop screen began flickering too much",
        "I tried finishing the homework, but the power surge in the building tripped",
    };

    // 3. Generate a random index between 0 and 9
    int randomIndex = rand() % templates.size();

    // 4. Combine the name with the randomly selected template
    cout << "\n--- Generated Excuse ---\n";
    cout << studentName << templates[randomIndex] << endl;
```

C++ Excuse Generator Program

more excuses and creative and fun to read

To make these even more engaging, I've categorized these new excuses into **"The Tech Disaster," "The Hyper-Productive Failure,"** and **"The Absurdly Realistic."**

Here is the updated code with **15 additional creative templates** and a few beginner-friendly tweaks to make the output look even more professional.

Enhanced Excuse Generator

C++

```
#include <iostream>
#include <vector>
#include <string>
#include <ctime>
#include <cstdlib>

using namespace std;

int main() {
    srand(static_cast<unsigned int>(time(0)));

    string name;
    cout << "Enter student name: ";
    getline(cin, name);

    // A larger list of creative, fun, and strangely believable excuses
    vector<string> excuses = {
        // --- The "Tech Glitch" Category ---
        " spent three hours debugging a ghost in the code that turned out to be a",
        " had the file saved, but the 'Auto-Save' feature decided to take a vacat",
        " was ready to submit, but the laptop's cooling fan started sounding like",
        " accidentally saved the assignment in a file format that currently only",
        " was about to click 'Send' when a sudden Windows update turned the scree
